TITLE: Medication adherence system includes
medication adherence tray adapted to comprise
prescription data communication device, docking station
adapted to receive tray, and medication-filled
containers comprising sensor
tag

ABSTRACTED-PUB-NO: WO2003048919A

BASIC-ABSTRACT:

NOVELTY - A medication adherence system comprises a medication adherence tray adapted to comprise a first communication device for receiving and transmitting prescription data; a docking station adapted to receive the medication adherence tray and comprise the first communication device; and medication-filled containers comprising a sensor tag.

DETAILED DESCRIPTION - A medication adherence system comprises a medication adherence tray (10) adapted to comprise a first communication device (140) for receiving prescription data from a prescription data storage device and transmitting it to the docking station; a docking station (20) adapted to receive the medication adherence tray and comprise the first communication device for communicating with the medication adherence tray the prescription data; and medication-filled containers (30) comprising a sensor tag.

An INDEPENDENT CLAIM is also included for a method of using a medication adherence tray by filling containers with medications; loading the filled containers onto the medication adherence tray; transferring prescription data from an external device to a memory storage device on the medication adherence tray; downloading the prescription data from the memory storage device on the medication adherence tray to a docking station; and conveying prescription data to a patient using the medications.

USE - For assisting patients in adhering to medication

schedules.

ADVANTAGE The medication adherence system of the invention reduces the time required to optimize and customize therapies for patients.

DESCRIPTION OF DRAWING(S) - The figure shows a medication adherence system of the invention.

Medication adherence tray 10

Docking station 20
